Japan Dealer Lists: Email Enrichment Report

Prepared for Casper Tan, AstraMed (CHISON). 10 October 2026.

Files delivered

- CHISON_Market_Development_Target_List_v20.xlsx (replaces v19; Japan Dealers and Japan Additional tabs updated)
- Japan_Distributor_List_Human_v2.xlsx (replaces v1; Master List updated, Email and Website added to Tier A Shortlist)

Coverage

Tab	Companies	Email found	Verified on own website	Contact form only	No website found
Japan Dealers (v20)	68	45	20	16	1
Japan Additional (v20) and Master List (v2)	288	109	67	98	59

- Total: 154 of 356 companies now carry an email address.
- 114 more companies publish no email but have a contact form; the form link is in the Email source column.
- 60 companies have no verified website; phone or a registry lookup is the next step.

Columns added or changed

- Japan Dealers: new columns P Email, Q Other emails found, R Email source, S Email confidence. Website filled in where the old cell only said search.
- Japan Additional and Master List: column O Email filled, column G Website filled where previously Not confirmed, column R Contact confidence set to Verified or Likely when an email was found. New columns AE Other emails found, AF Email source, AG Email confidence.
- Tier A Shortlist (v2): new columns M Email and N Website.

How to read Email confidence

- Verified: the address is published on the company website; the page is in Email source.

- Likely, indexed on company domain: the address uses the company domain and appeared in an exhibitor list, job board or similar page.
- Likely, third party listing: only 2 rows (Ishiguro Medical System and Nagano Ika Kikai), both from association or city lists. Check before sending.
- HR or recruitment inbox (16 rows) and IR or PR inbox (2 rows): the only address the company publishes. Ask for the message to be forwarded to sales.

Method

- Each company website was found through Yahoo Japan search and accepted only when the Japanese company name appears on the site itself.
- The homepage and contact, company profile and access pages were crawled for published addresses, including protected addresses.
- Where the site showed nothing, the company domain was searched for indexed addresses.

Self check performed

- 20 Verified emails picked at random and re-fetched from their source page: 20 of 20 confirmed.
- Every Likely row reviewed by hand. Removed: 12 third party hits that belonged to other organisations (universities, an FM station, a logistics firm), placeholder addresses such as abc@gmail.com, a US subsidiary staff address for Fukuda Denshi, and one wrong website (a coaching firm matched to Matsumoto Medical).
- Group companies share one inbox in three rows: Wakita Shokai, Shinetsu Wakita and Hokuriku Wakita all use saiyou@kk-wakita.co.jp.

Limits

- Large groups such as Suzuken, Ship Healthcare, Japan Lifeline and TS Alfresa publish no email at all, only web forms.
- Mail server (MX) checks could not run from this environment, so addresses were not test sent.
- Personal staff addresses found on sites (for example takayuki_ueno@marubun.co.jp) are kept as found; confirm the person is still in role before sending.
